# Extensión, Localización e Impacto de la Enfermedad Multivaso en IMEST

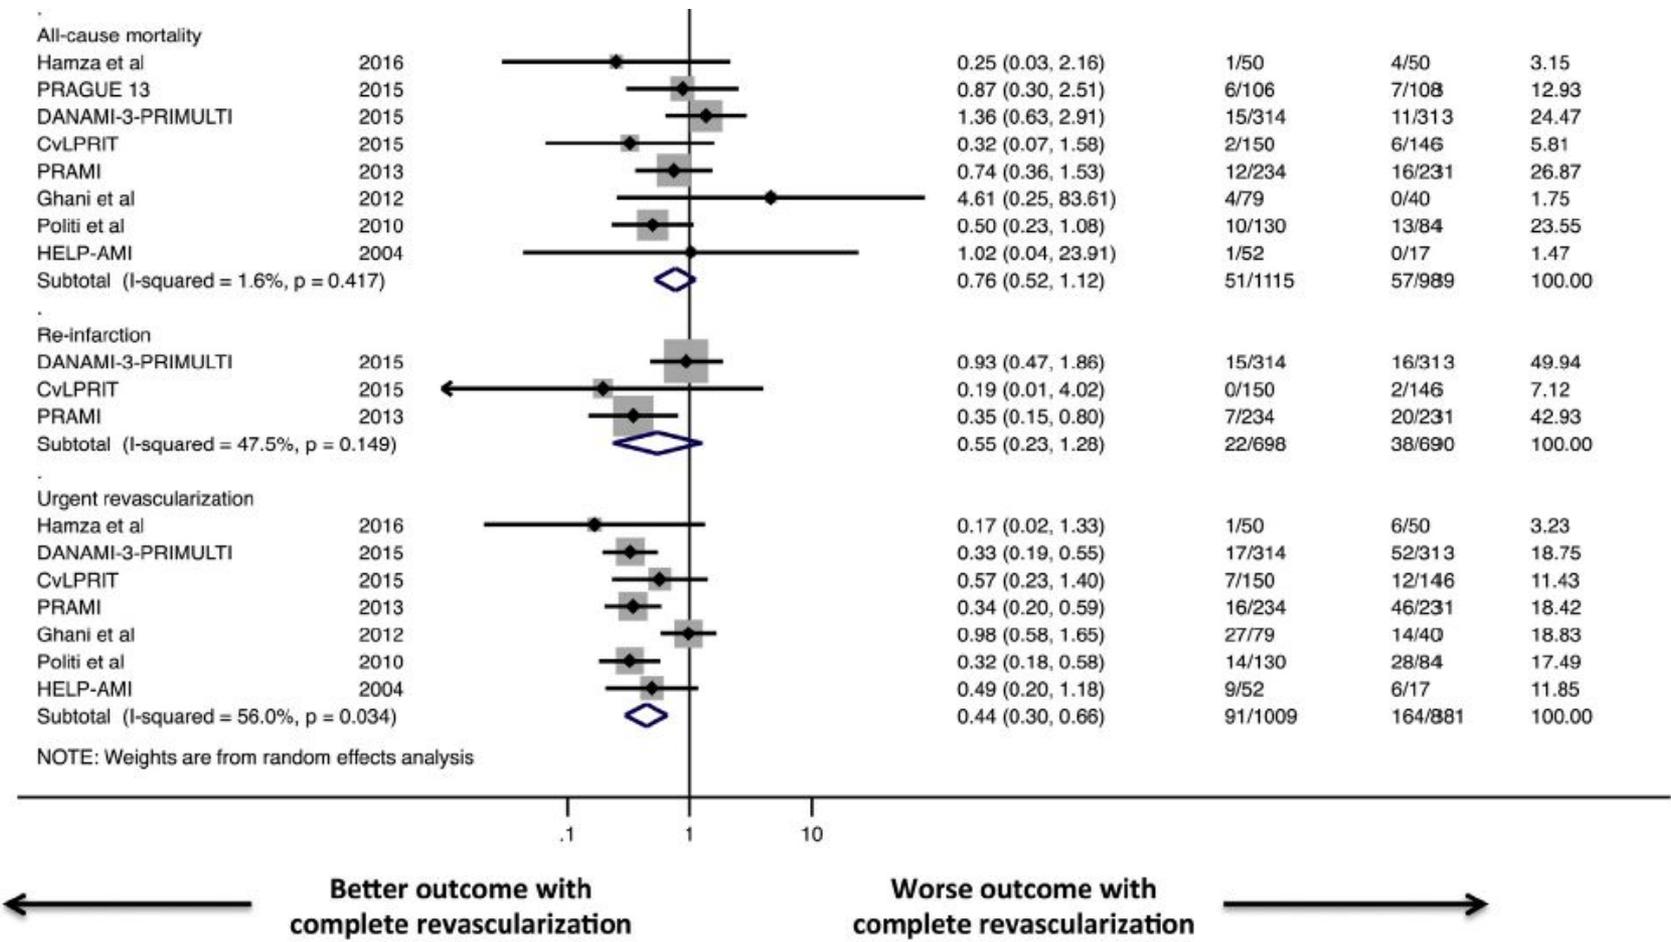

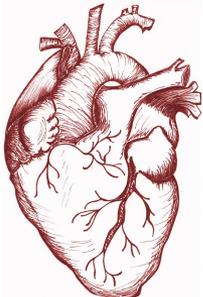

Kaplan-Meier Curve for 30-Day Mortality Between Patients With and Without Obstructive Non-Infarct-Related Artery (Non-IRA) Disease  
**Among 28 282 patients**, 15 patients with missing information on mortality (6 patients were missing any indication of death and 9 did not have data on time to death) were excluded (n = 28 267).

# Revascularización Completa vs. Arteria Culpable

## Ensayos Clínicos Principales

RCT, año	N, estrategia	Eventos completa	Eventos control
<b>PRAMI, 2013</b>	n=465 100% index	23-mo MACE 9% Mort CV 1.7% MI 3% Refr angina 5.1%	23% (p<0.001) 4.3% (ns) 8.6% (p=0.009) 13% (p=0.002)
<b>CvLPRIT, 2015</b>	n=296 30% staged	12-mo MACE 10% Mort total 1.3% MI 1.3% Revasc 4.7%	21% (p=0.009) 4.1% (ns) 2.7% (ns) 8.2% (ns)
<b>DANAMI-3- PRIMULTI, 2015</b>	n=627 100% staged (FFR)	27-mo MACE 13% Mort total 5% MI 5% Revasc 5%	22% (0.004%) 4% (ns) 5% (ns) 17% (<0.0001)
<b>Compare-Acute, 2017</b>	n=885 17% staged (FFR)	12-mo MACCE 7.8% Mort total 1.4% MI 2.4% Revasc 6.1%	20.5% (<0.001) 1.7% (ns) 2.7% (ns) 17.5% (p<0.001)

# Revascularización Completa

Misma sesión ó durante ingreso hospitalario

**Duda culpable**

**Lesión crítica en no culpable (TFG < 3)**

**Escasa repercusión de infarto inicial**

**Dosis contraste**

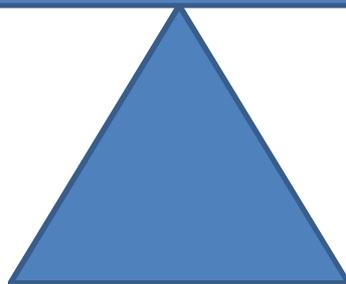

**TFG < 3 en culpable**

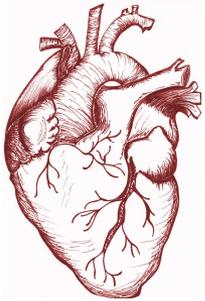

**Probabilidad cirugía**

**Lesiones complejas**

**Lesiones límite**

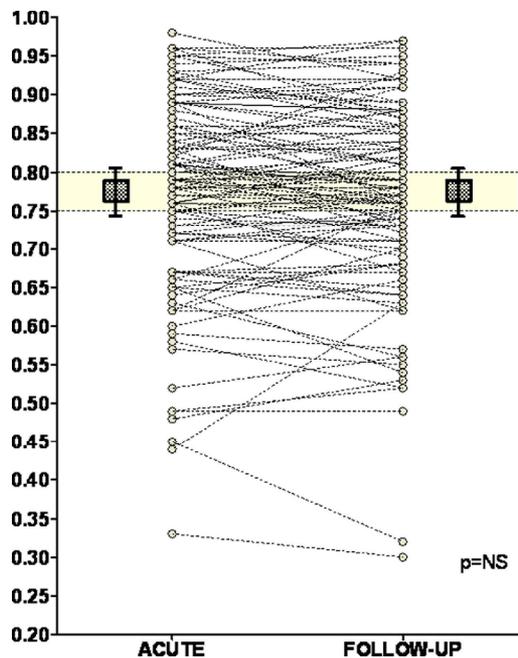

**Fatiga paciente o equipo**

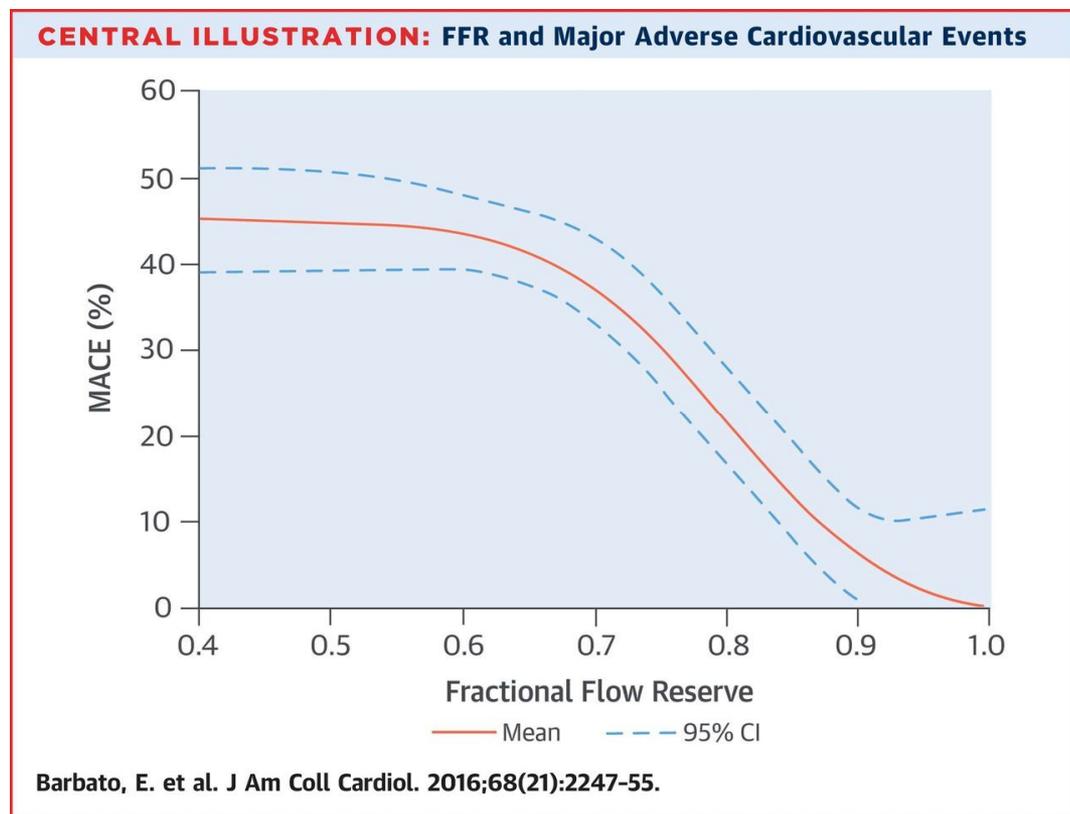

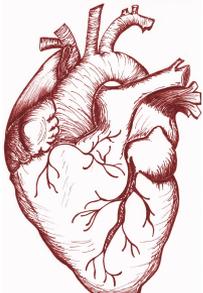

# Fiabilidad de FFR

- Infravalora severidad (FFR más alto) en casos de **obstrucción microvascular severa** (arteria culpable)
- En principio **fiable en no culpables** (Ntalianis, DANAMI-3)

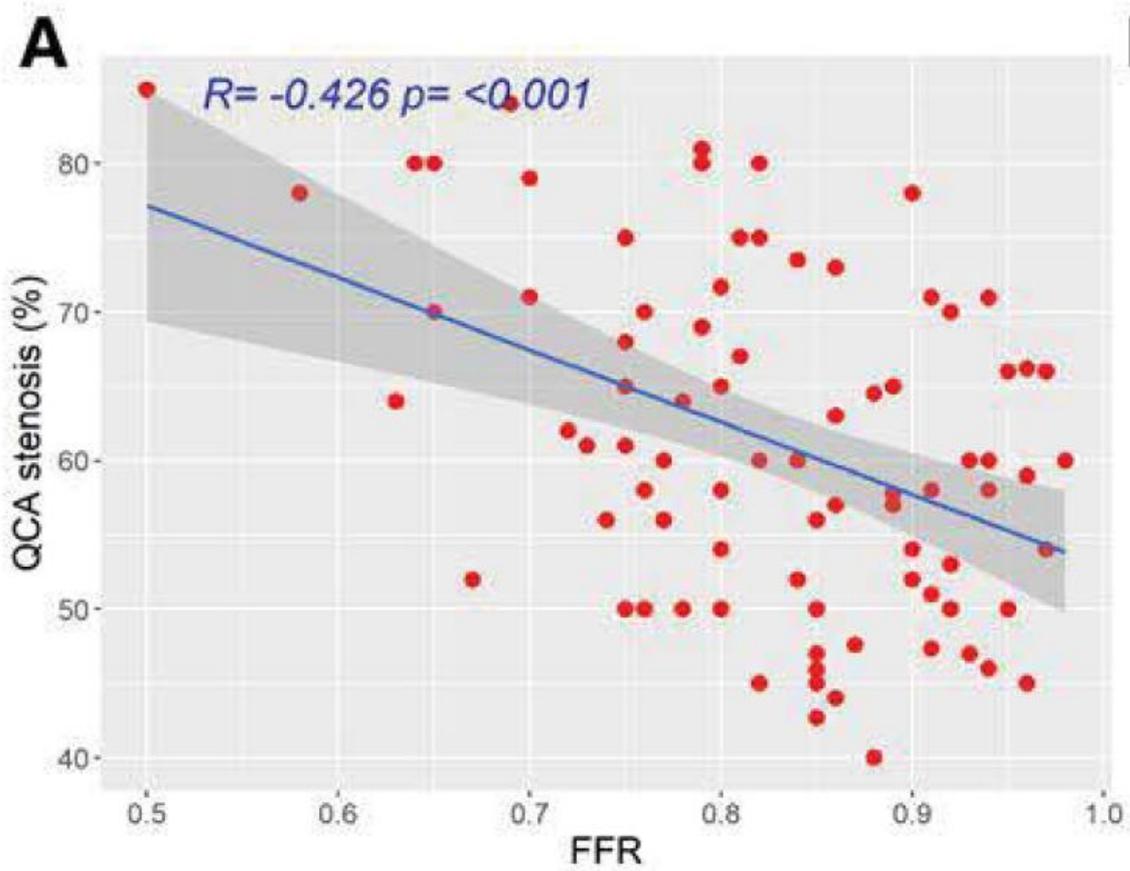

Ntalianis, JACC Intv 2010

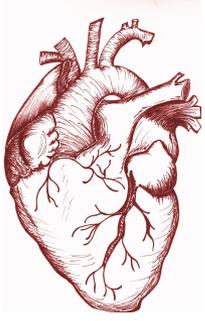

# Prevalencia de Disfunción Microvascular y Endotelial en Territorio No Culpable

## Estudio FISIOIAM

**N=84**  
**QCA (%) 61.5±11.5**  
**34% FFR≤0.8**  
**37% CFR<2**  
**28% IMR>25**  
**60% Test Ach (+)**

# Take-Home Messages

- La enfermedad multivaso es **altamente prevalente e impacta en la mortalidad precoz** tras un IAM
- La **revascularización completa se ha posicionado como el estándar de tratamiento** en la mayoría de los centros experimentados
- La **revascularización en un 2T durante el mismo ingreso hospitalario** facilita el empleo de técnicas diagnósticas adicionales y optimizar los resultados del intervencionismo
